

DM-H3 Setup

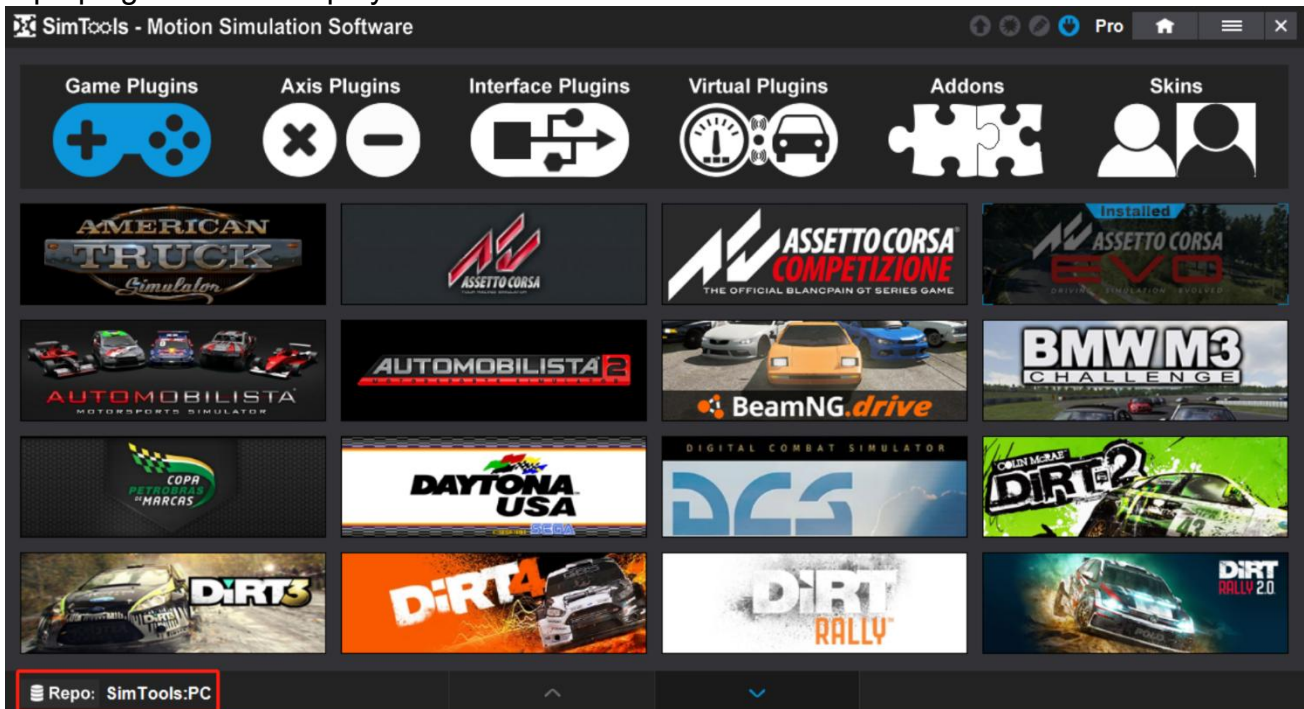

V1.02

After installing SimTools v3 and activating it, you need to set it up.

SimTools v3 has a Plugin Repository System built in. You can view plugins by going to the Plugin Manager within SimTools v3.

When you click the Plugin Manager button from the home screen, the SimTools PC repo plugins will be displayed.

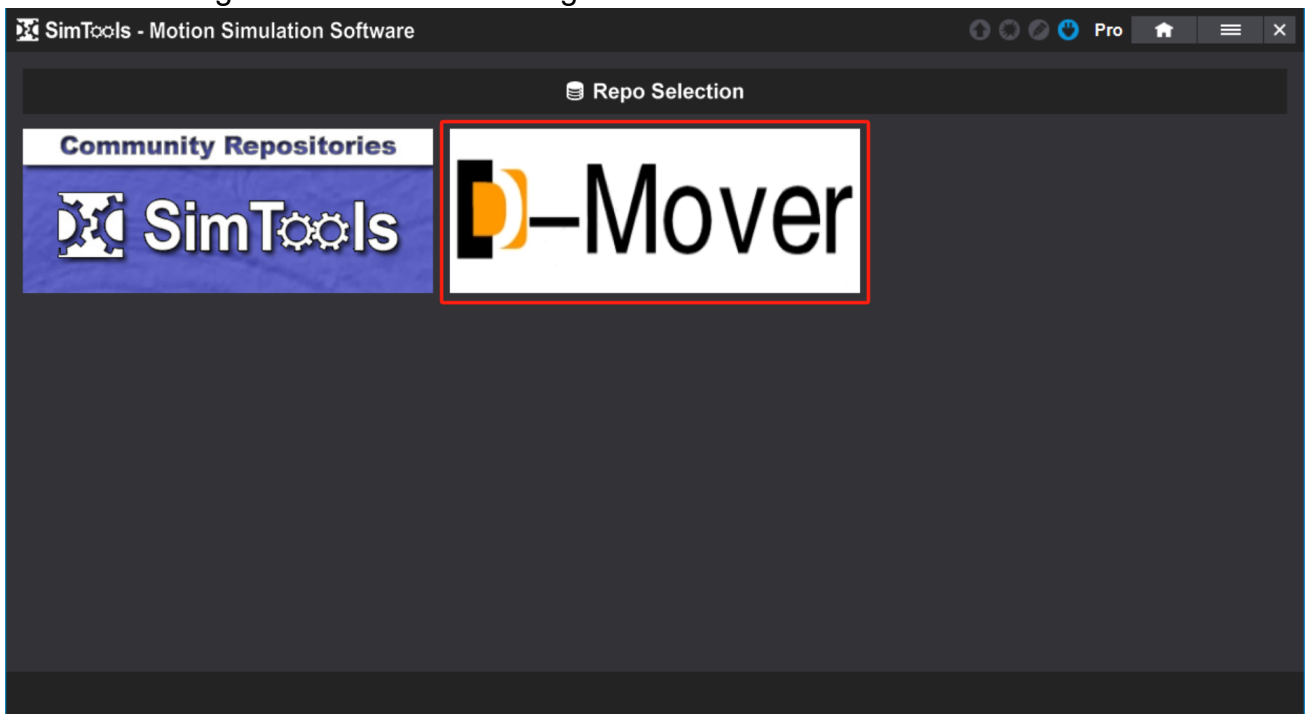

Change to the Repo by clicking on the "Repo" button seen in the image above.

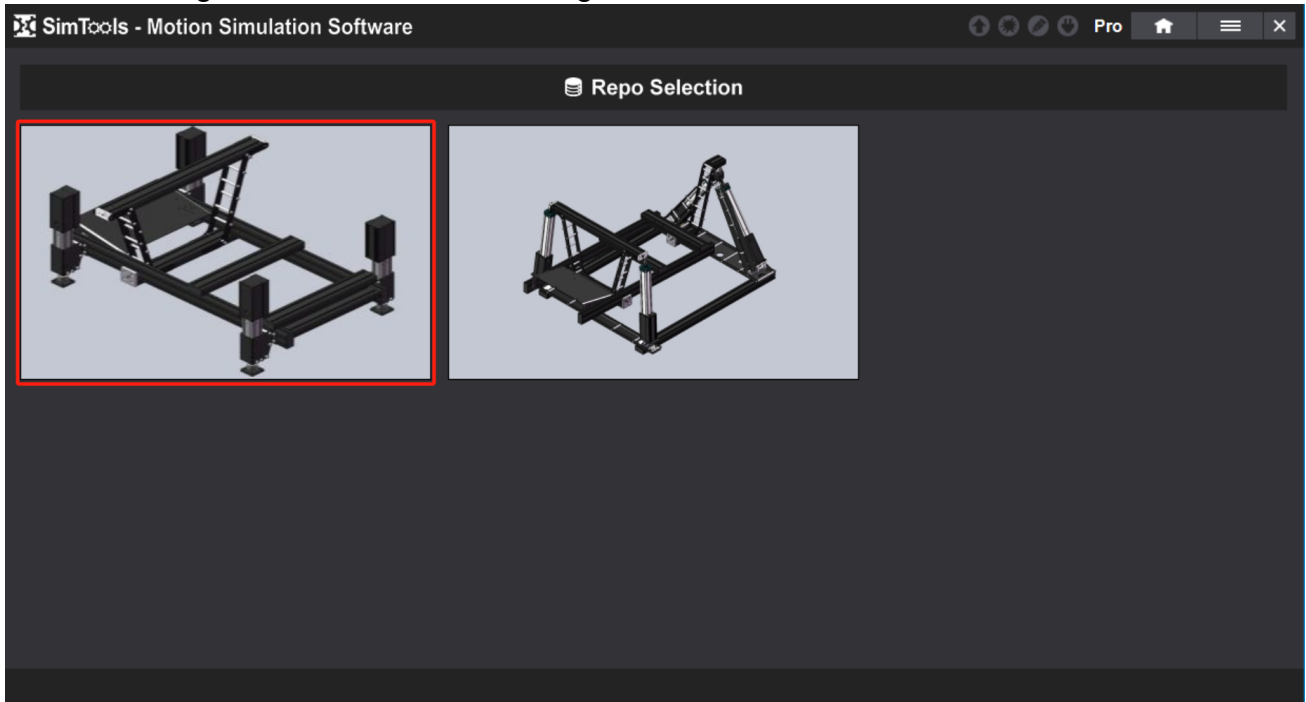

DM-H3 Setup

V1.02

Find & selecting D-Mover as below image:

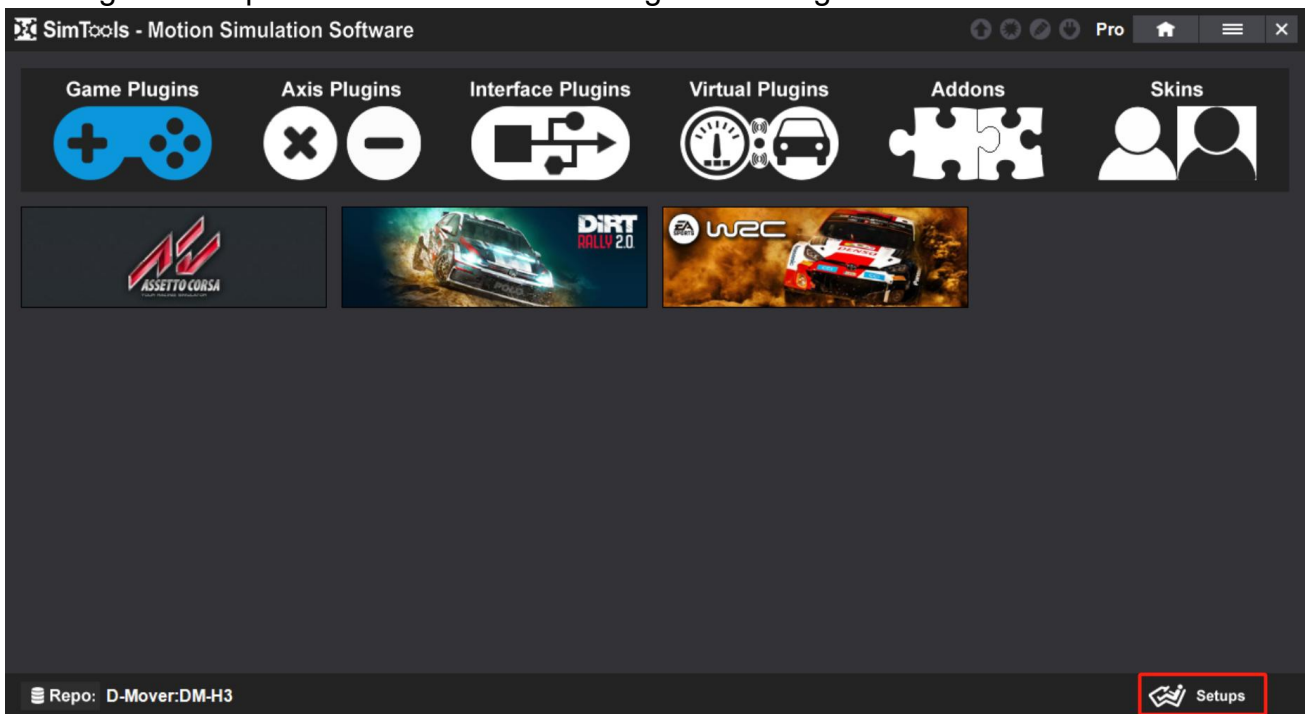

Then selecting the DM-H3 simulator image as below:

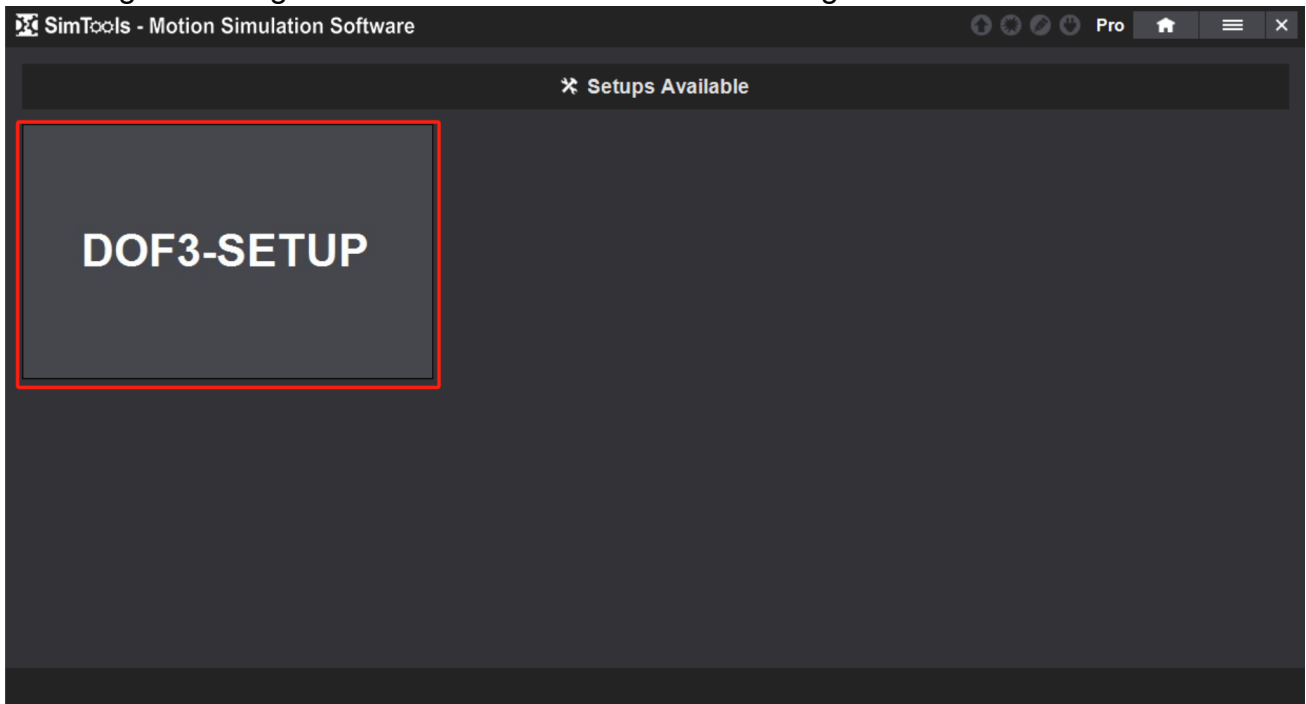

DM-H3 Setup

V1.02

Clicking the Setups button as seen in the image bottom right below:

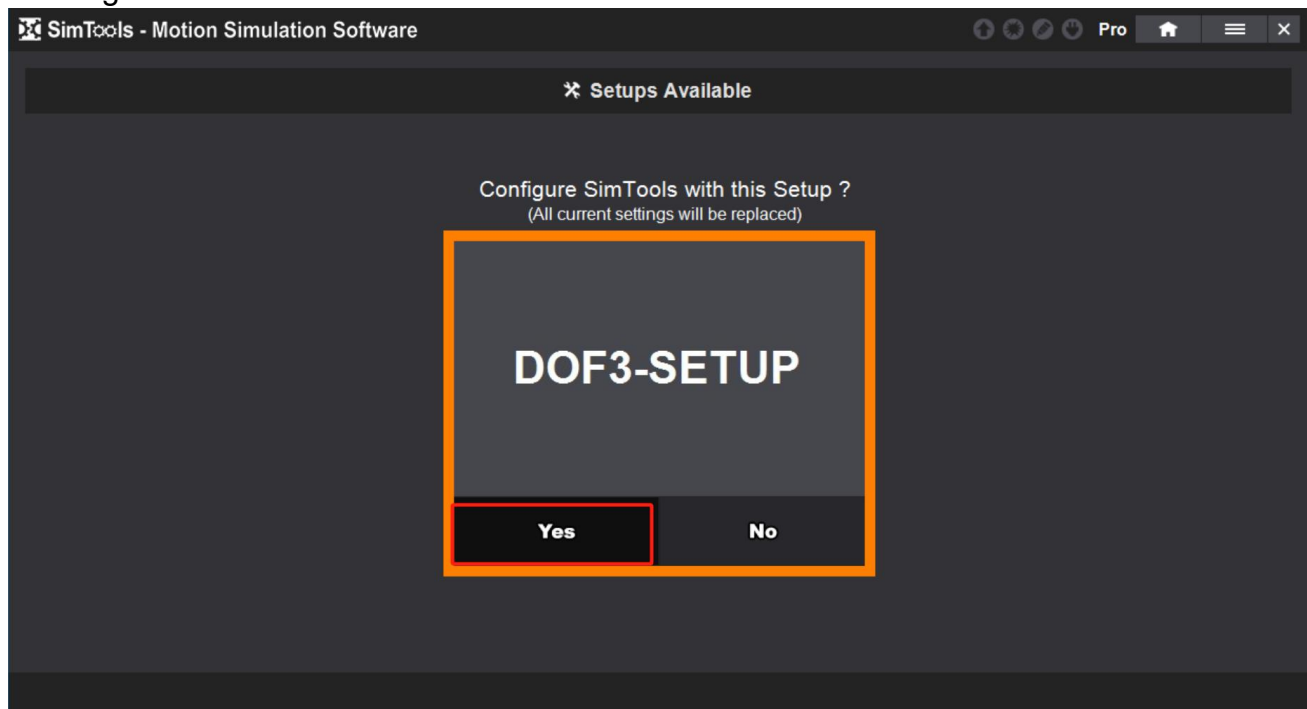

Selecting & Clicking the DOF3-SETUP as seen in the image below:

DM-H3 Setup

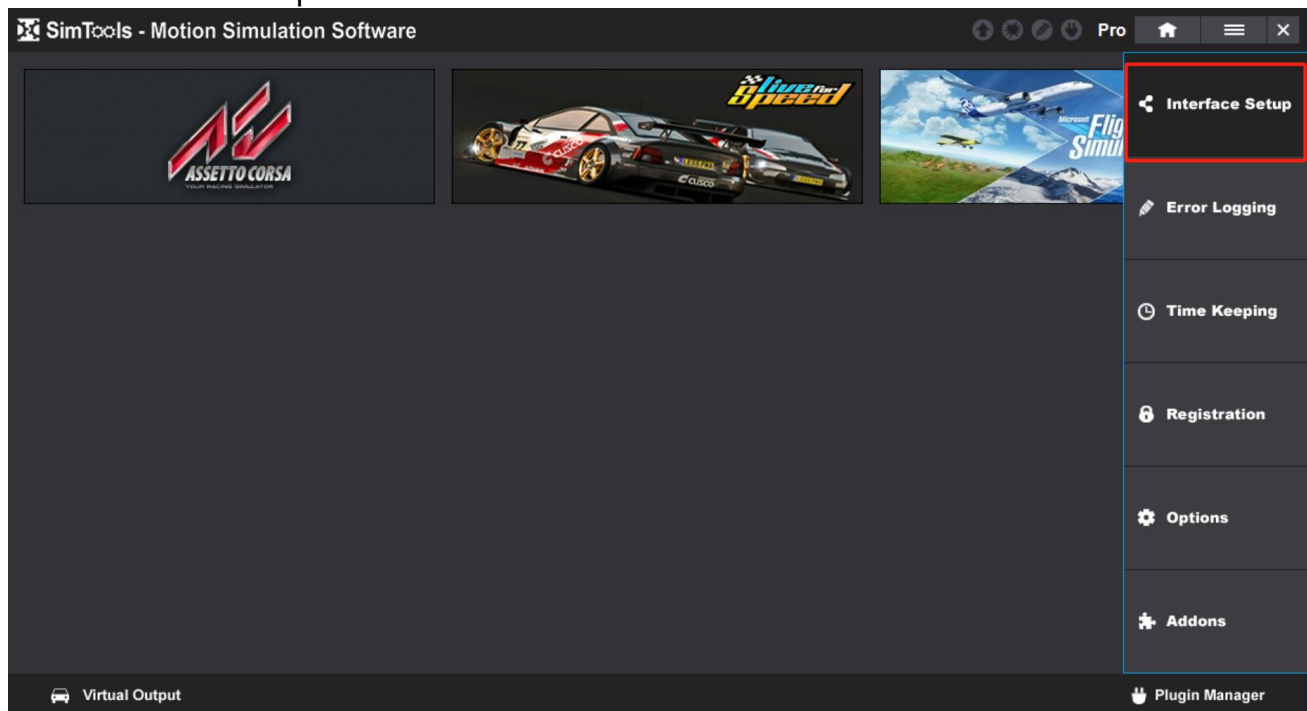

V1.02

Clicking Yes to install:

The installation process will require you to disconnect the USB hardware interface between the simulator and the PC, and then reconnect it. Just follow the prompts.

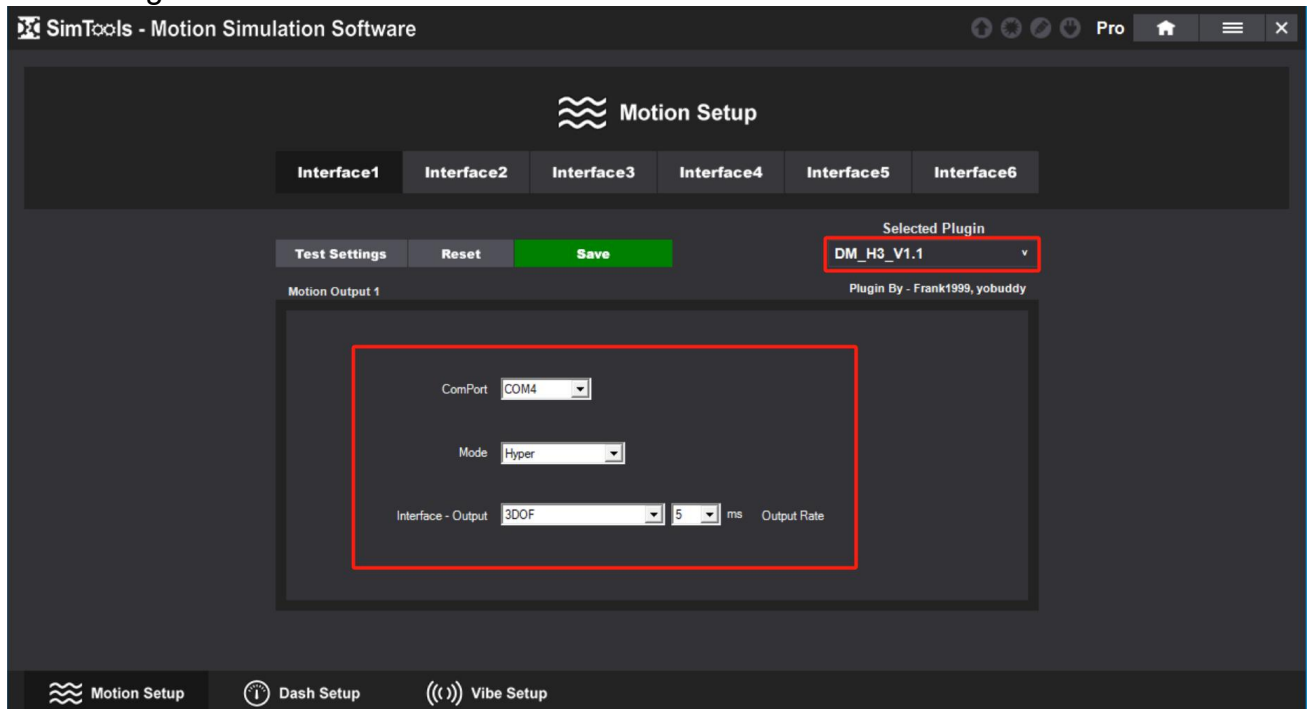

Once the setup installation finished, you can get to the interface settings from the main menu Interface Setup item.

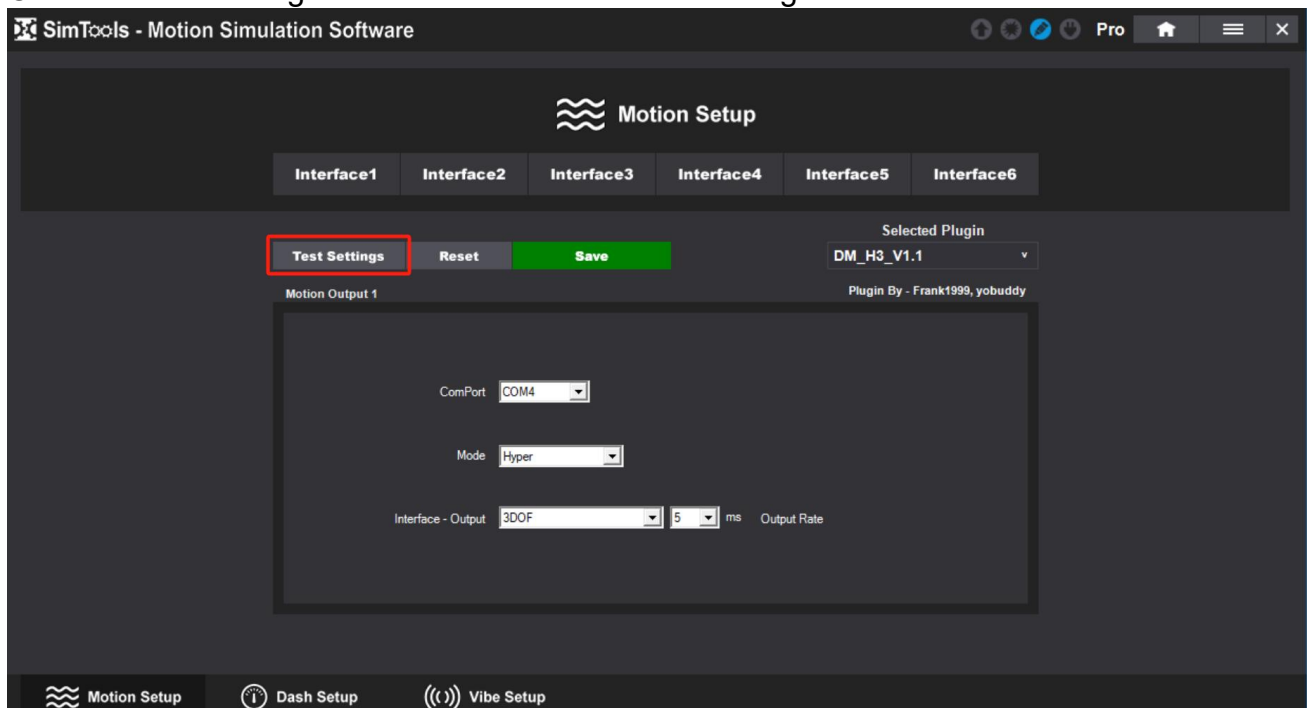

DM-H3 Setup

V1.02

Clicking the Interface Setup button and you will see the interface plugin has been set as seen in the image below:

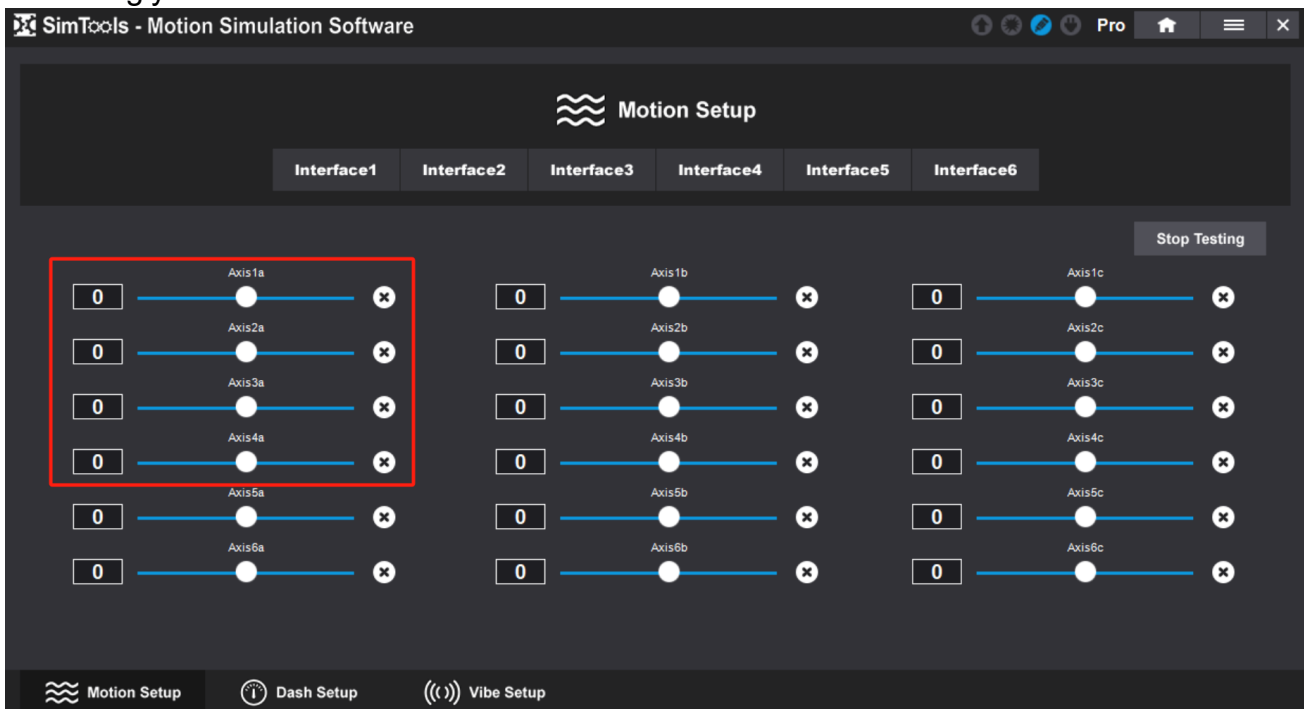

Click the Test Settings button as seen in the below image:

DM-H3 Setup

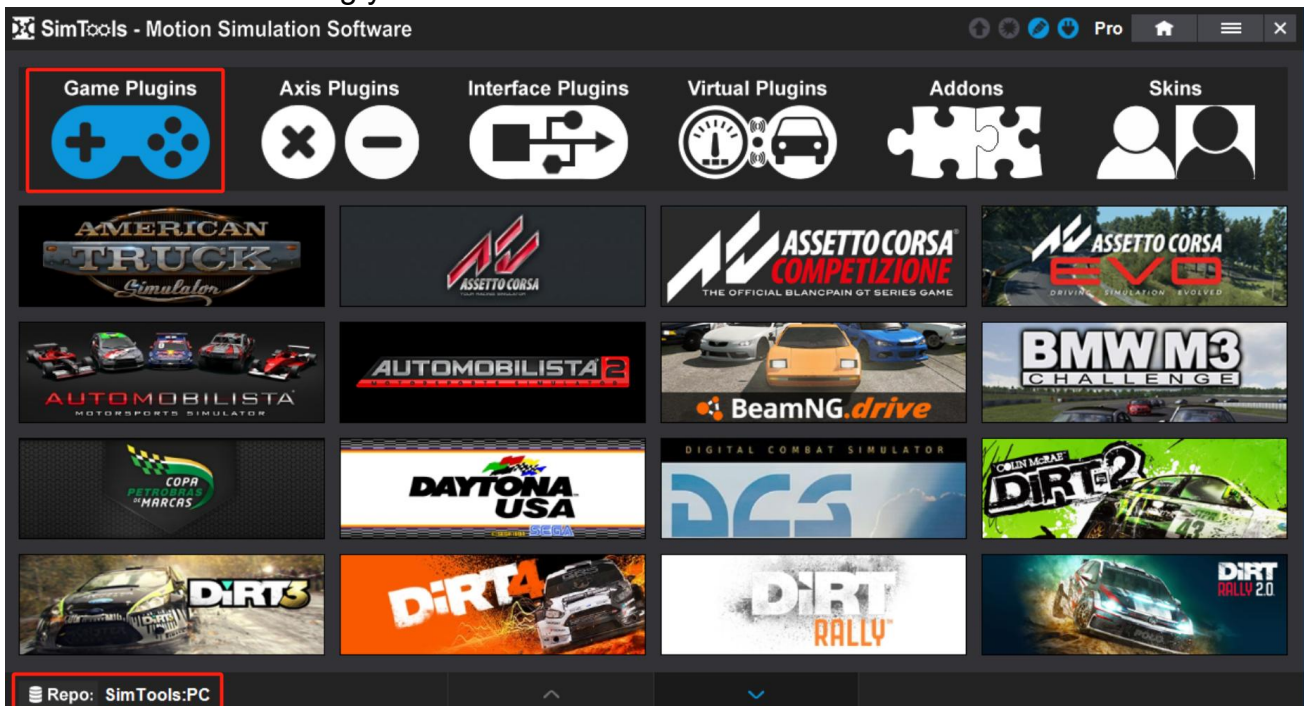

V1.02

The rig should raise up to the center(Parking position), use the mouse to move the Axis1a, Axis2a, Axis3a, Axis4a as seen in the below image, actuator No. 1, 2, 3, 4 will move accordingly.

Now that we have completed all the preparations for the software and hardware, only need to install game plugins to play the corresponding games.

You can install the game plugins in Repo: SimTools: PC as seen in the below image, but need to do some tuning yourself.

DM-H3 Setup

V1.02

Or you can also install the game plugins in our Repo: D-Mover: DM-H3 as seen in the below image(There are currently a small number of games, but they have been set up and tuned, can be played directly. We will continue to increase the number of games in our repo.):
